Multi-functional Furniture

Abstract

A multi-functional children's convertible furniture article which can be utilized for a number of different purposes including a **bassinet, cradle, bench, desk, rocking bench, high chair, or changing table**. The device includes a main frame h shaped member and two supported sides that are rotatable. The furniture article achieves all of its intended uses without disassembly. The main frame component is flat on one edge and curved on the opposite edge allowing for a rocking action in one disposition and stabilization when capsized. The main frame component allows for attachable legs to achieve its high position components. The rotatable sides have been designed to swivel up or down, singly or in unison. All of the furniture articles positions are achieved when combining one or more of the units actions.
